

CoPilot in Edge

The AI function available in Microsoft's browser Edge is called CoPilot.

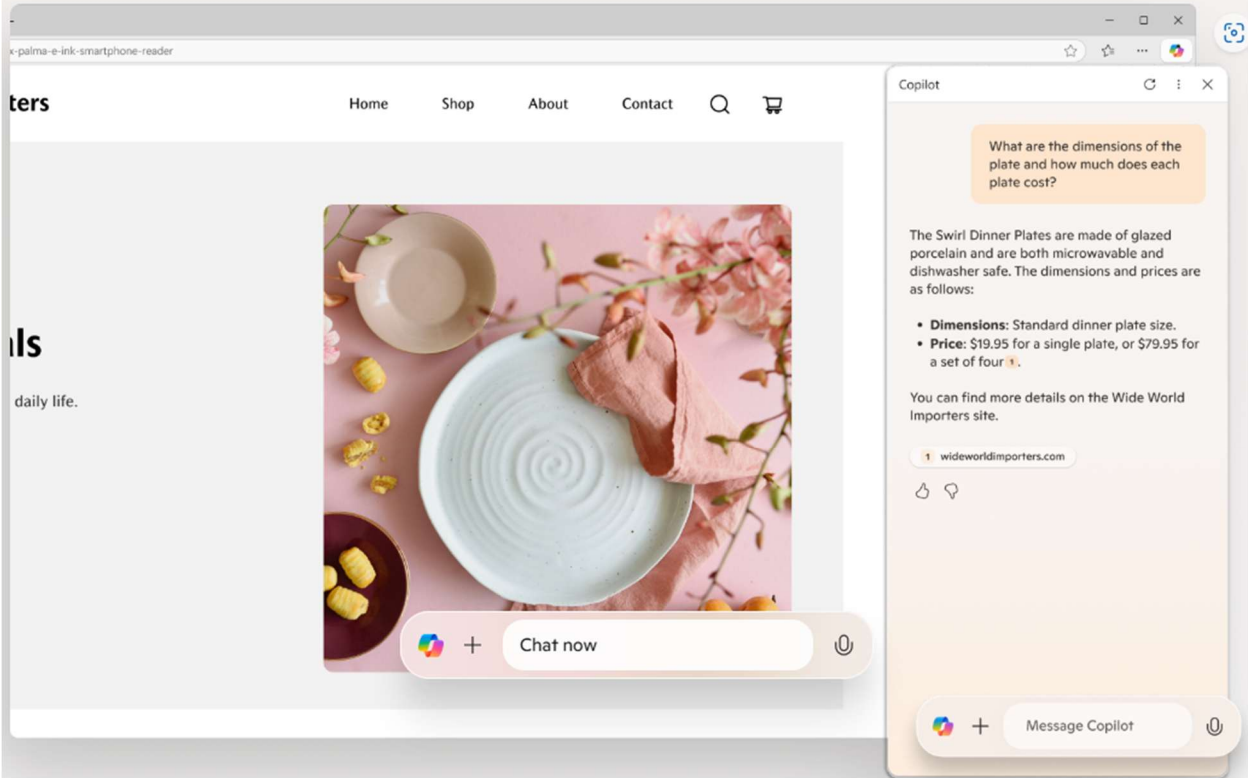

If you have Edge then click the following link > [What's new in Microsoft Edge](https://www.microsoft.com/en-us/edge/update/132?ep=925&form=M...)

The screenshot shows a Microsoft Edge browser window displaying the 'What's new in Microsoft Edge' page. The page features the Copilot logo at the top, followed by the heading 'Hi, I'm Copilot in Edge!' and the subtext 'Your AI companion for Summarizing an Article'. Below this is a 'Chat now' button with a plus sign and a microphone icon. At the bottom, there is a navigation menu with links for 'Copilot in Edge', 'Discover Cards', 'Prompt Builder', 'Scenarios', 'Features', and 'Copilot Pro', along with a 'Try now' button. A section titled 'What is Copilot in Edge?' is visible at the bottom of the page, with the text: 'With Microsoft Edge, Copilot is built right into your browser, ready to help. Whether you're reading an article, watching a video, or exploring a website, you can ask Copilot anything and get quick, relevant answers without ever leaving the page. Simply click [Copilot icon] to get started.'

What is Copilot in Edge?

With Microsoft Edge, Copilot is built right into your browser, ready to help. Whether you're reading an article, watching a video, or exploring a website, you can ask Copilot anything and get quick, relevant answers without ever leaving the page. Simply click  to get started.

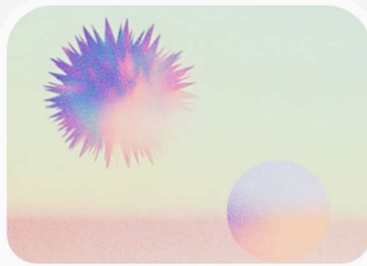

Your experience starts with personalized discover cards

Use discover cards as a little spark of inspiration tailored just for you. The more you use Copilot, the more helpful it will be. Explore some of Copilot's most popular asks.

ELIZA

what do you know about a program called Eliza?

Eliza is an early natural language processing computer program developed between 1964 and 1967 at MIT by Joseph Weizenbaum ¹. It was designed to simulate conversation by using pattern matching and substitution methodology, giving users the illusion of understanding ¹.

The most famous script for Eliza was the **DOCTOR** script, which simulated a Rogerian psychotherapist by reflecting users' statements back to them as questions ¹. This made it one of the first chatbots and an early test case for the Turing Test, which assesses a machine's ability to exhibit intelligent behavior equivalent to, or indistinguishable from, that of a human ².

Interestingly, Weizenbaum was surprised to find that some users attributed human-like feelings to Eliza, despite its lack of true understanding ¹. This program paved the way for many modern conversational interfaces and chatbots we see today ³.

Does this help answer your question, or is there something more specific you'd like to know about Eliza?
